What We Can Do For You

Our aim is to provide our clients with a reliable and secure technical environment customised to their needs, implementing IT solutions to achieve greater efficiency and productivity at affordable prices.

Data Security

Data security is essentially the practice of keeping your data protected from unauthorised users and hackers. Our primary focus of data security is to protect vital data while maintaining business integrity.

Networking

We understand network security is pivotal to your business which is why we ensure your network is optimally protected from intrusion and attack using physical and virtual Firewalls, anti-virus, and other solutions.

IT Installation

We understand the costly price tag that accompanies the installation of new hardware, software, and networks within an organisation. This is why we aim to provide businesses with competitive pricing across all of our IT Installation services.

Did you know
that Office 365 is
ISO 27001,
27018, and Safe
Harbour
compliant?

Managed Services

Your In-House
IT Professional

About Our Managed Services

Our primary mission at Bluescope Technologies is to deliver Managed Services to businesses of all shapes and sizes. Our team of professionals are highly skilled and experienced to solve any IT queries or issues your business may have – over the phone, through our IT Support Helpdesk, or by means of an on-site visit.

We offer businesses all the benefits of an in-house IT department, without the exponential cost of hiring an entire IT department.

Bluescope's headquarters are situated in Limerick, Ireland, and has offices in Australia, United Kingdom, and Hong Kong. This ensures that we can deliver our clients the best service possible, 24 hours a day.

Save money for your business by making the switch to Microsoft Office 365 today.

Managed Products

Tailor your Managed Products plan on a 30-day rolling contract

Tailor your Managed Products plan to suit your business' every need. All Managed Products are available on a 30-day rolling contract and can be amended each month as your business sees fit.

Managed Web Protection

Web threats have increased over the past few years. From phishing sites to drive-by downloads, the dangers have never been greater. To stay safe, you need to make sure you have advanced malware protection. Our web protection goes beyond enterprise antivirus software and firewalls by letting you set your own content-filtering policies, website blacklists, time and content-based browsing policies, and much more.

Bluescope's Managed Anti-Virus helps to keep both known and emerging malware off workstations and servers. Managed antivirus not only stays up-to-date with the latest threats using traditional signature-based protection, but also protects against new viruses using sophisticated heuristic checks and behavioural scanning.

Managed Anti-Virus

Managed Workstation Backup

Protect your digital assets with a hybrid-cloud backup and recovery offering. You can back up and recover at a file, application, or machine-level, and protect both physical and virtual machines. You can rest assured knowing that you are deploying a fast, simple, and predictable solution. Our backup and disaster recovery features are affordable, with per-device pricing for workstations.

Managed Products

Tailor your Managed Products plan on a 30-day rolling contract

Managed Server Backup

Backing up a server is a crucial component of your layered security strategy. Using several layers of preventive defenses will protect you from most IT security threats, but you could still be vulnerable to hardware failures, acts of nature, and newly emerging malware. Any of these can wreak havoc on a business's bottom line. Bluescope's Managed Server Backup & Recovery helps return all systems to safe states, making it essential to a strong layered security strategy and potentially saving millions for businesses.

Mobile Device Management - Employee

Today's IT service management solutions need to account for mobile devices and on-the-go employees. This means you need solid mobile device management software that lets your employees be more productive by using their preferred devices while still keeping the network safe and secure.

Mobile Device Management - Company

Our mobile device management features are scalable, easy-to-configure, and easy-to-manage. It makes your device management more efficient and allows you to reduce risk with fast, automated setup and maintenance of your mobile fleet. For businesses which provide company devices, such as mobile devices and tablets, management is essential.

Website Design

Eye-Catching Websites
At Affordable prices

About Our Website Design Skills

We have vast experience of working with the open source CMS system, Joomla, which allows us to create eye-catching websites for your ever-growing business.

At Bluescope, our aim is to create high-end, responsive, and user-centric websites to identify with your business's core marketing strategies and company values.

We believe every business should have an online presence. A website runs 24 hours a day, which means that your customers and potential customers can always find the information they need – while gaining customer leads in the process.

Grow your business with a striking website to draw in even more customers.

Our Website Plans

At Bluescope, we work closely with each business to develop your perfect website – designed around your own requirements. Choose from our three website plans to begin building your optimised website.

Static Website

Simple, eye-catching, user-friendly websites. Up to 10 landing pages and integrated forms to generate leads.

SEO Improvements

Having trouble getting your website to be found? We redefine your website search criteria to achieve higher search engine rankings through SEO.

Dynamic Website

Whether your business is B2B or B2C, we can create the perfect website to suit your needs. Including unlimited landing pages, optional e-commerce functionality, and database creation to store leads from integrated forms.

Data Security

Protect Your
Information,
Cost Effectively

Why You Should Protect Your Data

Data is one of the most important assets to a business, most often the key to many business's success. But what happens if this data was to fall into the wrong hands?

In many cases, data can be lost through human error. Bluescope uses **Data Segregation** as a tool to keep your information safe at all times. Data Segregation is used to separate data among each user in a business – a type of need-to-know basis for delegating data.

Our mission is to safeguard your data from any potential threats that may arise.

We offer a range of services that makes sure your business data follows Data Compliance regulations and also achieves Due Diligence. Furthermore, business data is occasionally subject to audits by data controllers – according to governing laws, all data must follow certain guidelines.

Data Compliance & Due Diligence

Data compliance is of utmost importance to us, which is why we strive to provide you with the highest level of security for your data. By following the regulations set out in the Data Protection Acts 1988 and 2003, we perform due diligence on all of our data security services.

Did you know that Office 365 is ISO 27001, 27018, and Safe Harbour compliant?

Some of the many tactics we introduce are:

- Data Encryption - Encryption with a minimum of SHA.256 – model
- Full Control – Stay in control of all authorised users, monitor who accesses data through all devices
- Keep your data backed up at all times. We can also remotely wipe a device if the need arises.

Networking

Designing Networks to Meet Your Business Requirements

What is a Network Infrastructure?

A network infrastructure defines a group of computer devices connected together forming a network. The efficiency and performance of this network depends on how it is designed and how those devices can best interact together.

An IT network engineer designs the computer networks that organisations rely on to access, share, and store information. Network engineers implement and maintain Local Area Networks (LAN), Wide Area Networks (WAN), the corporate intranet and internet connections, and the Virtual Private Network (VPN).

Our Networking Capabilities

At Bluescope Technologies, our experienced team of professionals will design and implement an effective IT infrastructure that is best suited to your business needs. We offer quality services and support - whether you are looking to upgrade existing infrastructure or starting a new business.

We can design and implement Local and Wide Area Networks (LAN/WAN) sourcing the most up-to-date types of computers from the best vendors available, enabling your business to become more effective and efficient.

We understand network security is pivotal to your business which is why we ensure your network is optimally protected from intrusion and attack using physical and virtual Firewalls, anti-virus, and other solutions.

IT Installation

Comprehensive
& Flexible
Installation
Services

About Our IT Installation Services

In the ever-evolving technology sector, new technologies are emerging every day. Many of these technologies are implemented into a business' every day operations – however, these must first be installed.

At Bluescope Technologies, we understand the costly price tag that accompanies the installation of new hardware, software, and networks within an organisation. This is why we aim to provide businesses with competitive pricing across all of our IT Installation services.

All of our installation services are available during out-of-office hours as ensure that business disruption is kept to a minimum.

Get it Right, First Time Around

By choosing Bluescope for all your IT installation needs, you're gaining experienced and qualified technicians to ensure that the job is done correctly, first time around.

Some of the many services we provide in IT installation are:

- Hardware - *Workstations such as desktops and laptops, servers, printers, and other devices.*
- Software - *Microsoft applications among many other software used within a business.*
- Backups - *Periodic backup configuration of all data and applications.*
- Security - *Anti-virus's and firewalls to ensure your data is kept secure at all times.*
- And more...
